

LiteScape

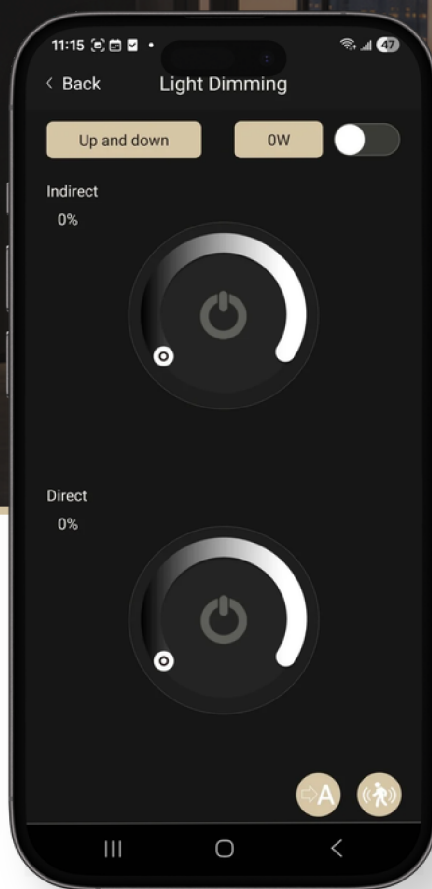

Your whole lighting system, right in your pocket

Commission, control and automate Bluetooth lighting from one app — on site, with no gateway and no internet connection required.

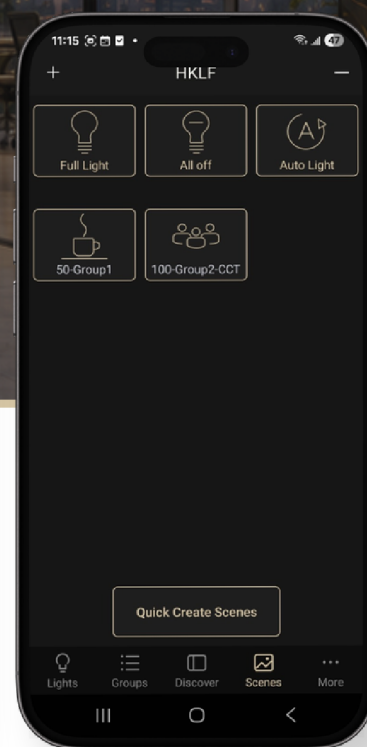

Zones & access

Admin & user access by QR code

Dimming & tunable white

Brightness, trims and 2700–6500K

Scenes & schedules

One-tap presets and timed automation

0

No gateway or internet connection needed

100

per zone

66

scenes per zone

32

schedules and 32 switches per zone

Reliable by design

Settings are stored in each luminaire controller, so the system keeps running after a power outage, with no cloud dependency. Mesh data is encrypted.

From first scan to a finished project

WHAT THE APP DOES

Commissioning

Create zones, scan nearby devices and flash each light to identify it. Name lights, set rated power and hand over to the building manager by sharing a QR code.

Sensor settings

Occupancy or vacancy mode, hold and warning timers, dim level and sensitivity. Daylight harvesting with Soft, Mild, Aggressive or Custom strategies.

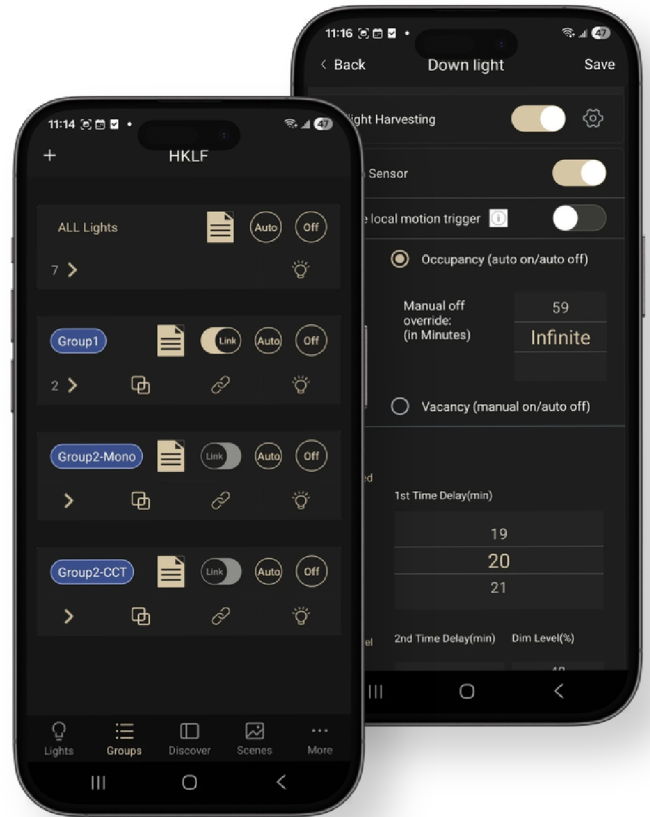

Dimming & color tuning

Dim single lights or whole groups, set high and low trim, and tune white from 2700K to 6500K. Save looks as scenes and run them on schedules.

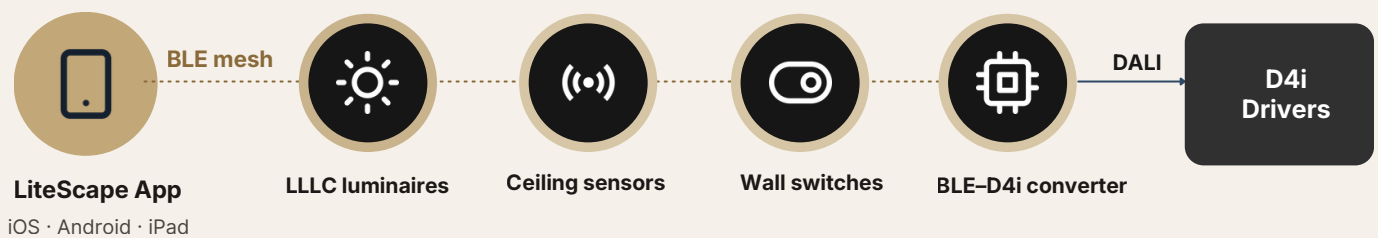

BLE + DALI / D4i

A Bluetooth-to-D4i converter brings DALI drivers into the same app — a simple path for small-to-medium projects and retrofits.

ONE BLUETOOTH MESH • EVERY DEVICE RELAYS THE SIGNAL

FOUR STEPS TO COMMISSION

01

Plan

Zones & control intent

02

Build

Lights, groups, scenes

03

Tune

Sensors & timers

04

Deliver

Verify & share QR
