

ARCHITECTURAL LIGHTING CONTROLS + BUILDING MANAGEMENT

Start with lighting. Scale to building intelligence.

LiteScape lighting controls connect with
Autani EnergyCenter as projects expand
into building-wide management.

LITETRACE BRANDS

THE CONNECTED BUILDING OPPORTUNITY

Lighting is only the beginning.

Lighting controls already capture when spaces are occupied, how they are used and where energy can be reduced. Connect that intelligence to Autani EnergyCenter, and the same building data can support HVAC control, demand management, energy monitoring and better operational decisions.

LiteScape provides a flexible starting point at the fixture, room or zone level. Autani extends that control across the building, turning connected devices into broader visibility and value.

Use lighting intelligence to inform the building around it.

SCALE AT YOUR PACE

From simple controls to enterprise intelligence.

Start where the project needs. Expand when the building is ready.

ENTERPRISE ANALYTICS PLATFORM

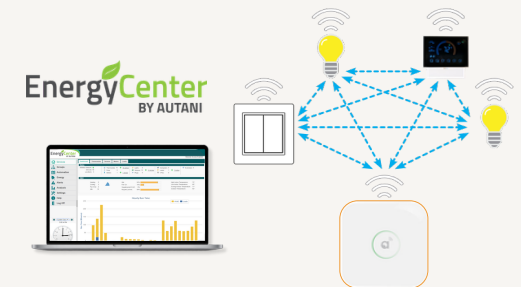

Portfolio-wide visibility, analytics and operational insight.

SCALE TO ENTERPRISE

CENTRALIZED NETWORKED SYSTEM

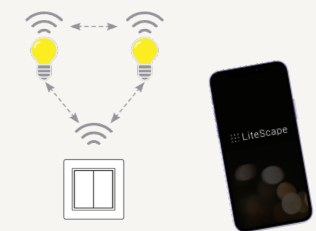

Centralize lighting, HVAC and connected building systems with EnergyCenter.

CONNECT MORE

NETWORKED LIGHTING CONTROLS, GATEWAY FREE

Wireless Bluetooth Mesh lighting control with app-based commissioning.

START SIMPLE

BASIC, STANDALONE

Reliable local control for individual spaces.

LITESCAPE LIGHTING CONTROLS

Start with LiteScape.

Architectural lighting control designed for compact integration and flexible commissioning.

-  **Bluetooth Mesh**
Wireless control and commissioning.
-  **DALI + D4i**
Digital lighting control and fixture-level intelligence.
-  **Occupancy + Daylight**
Support automatic dimming and switch-off where configured.
-  **App-Based Commissioning**
Assign DALI addresses and configure dimming curves, sensor parameters, zones, scenes and schedules
-  **Local Control**
Support dimming, scenes and high-end trim by space or zone.

Bluetooth Mesh • DALI-2 • D4i
Certifications and interfaces vary by model.

LITESCAPE + AUTANI ECOSYSTEM

From fixture-level control to building-wide intelligence.

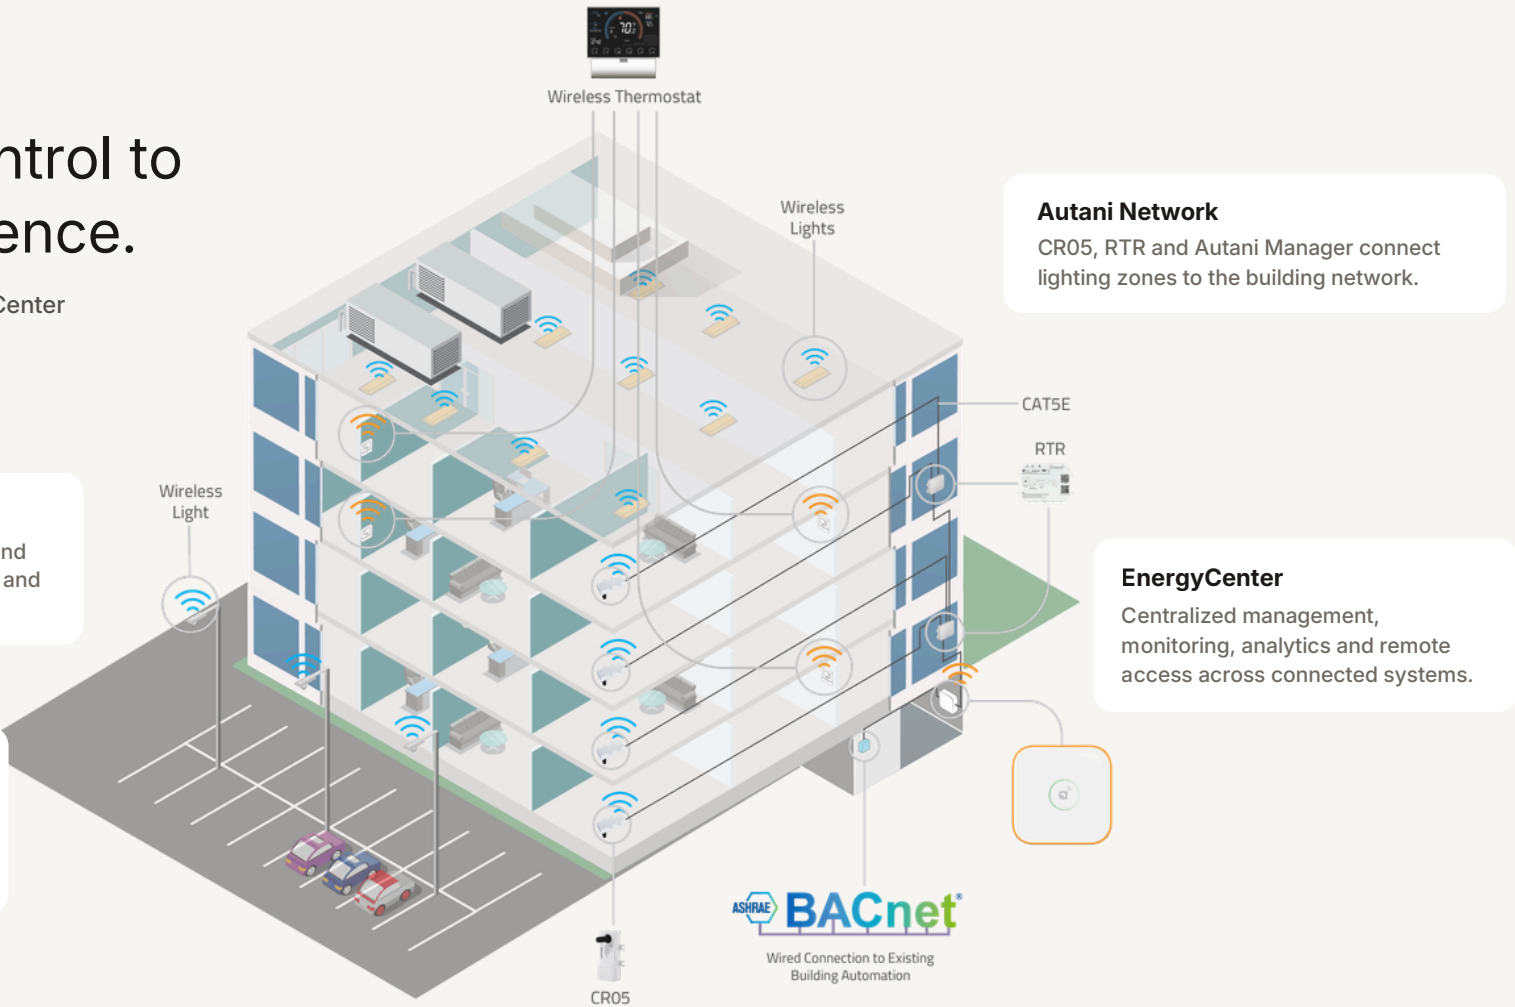

Connect LiteScape lighting zones to Autani EnergyCenter for centralized building management.

Fixtures + Sensors

LiteScape controllers, D4i nodes and sensors manage lighting at fixture and zone level.

Bluetooth Mesh + DALI

Wireless communication and wired digital lighting control connect each lighting zone.

AUTANI + ENERGYCENTER

Scale with Autani.

EnergyCenter extends control beyond lighting, bringing connected building systems into one environment for management, monitoring and analytics.

-  **Centralized Management**
Manage connected lighting and building systems from EnergyCenter.
-  **HVAC Integration**
Coordinate thermostats and schedules around occupancy and operating needs.
-  **Demand Management + Automated Demand Response**
Coordinate lighting, HVAC and selected electrical loads during peak-demand or demand-response events.
-  **Metering + Monitoring**
Track energy performance and identify changes over time.
-  **Plug Load Control**
Manage selected receptacles to reduce phantom loads and support energy-code strategies.
-  **Remote + Open Integration**
Remote access plus supported third-party integration, including BACnet.
